

Size guide

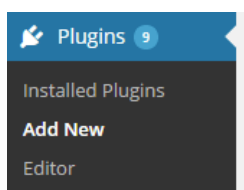

1. Size Guide

1.1 Installation and activation

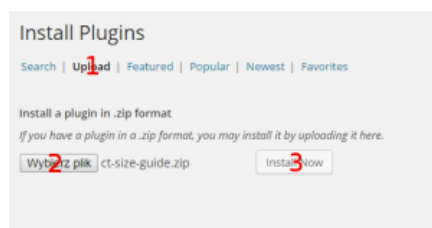

Installation via Administration Panel

When Size guide files are downloaded from your CodeCanyon account. You can start installation using WordPress administration panel.

Once you've logged into your administration panel go to *Plugins > Add New*

Then:

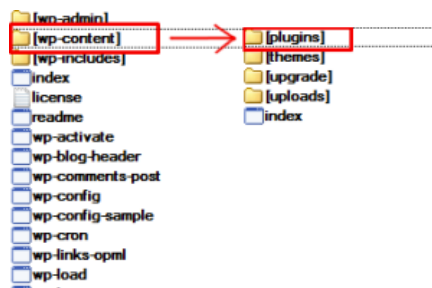

Chose *Upload* (1), click *Select a file* (2), ct-size-guide.zip from your hard drive and click *Install Now* (3)

Installation via FTP

To install Size guide via FTP follow step below:

- **Step 1** – Unarchive ct-size-guide.zip file
- **Step 2** – Access your host web server using FTP client
- **Step 3** – Find directory *wp-content > plugins*
- **Step 4** – Put folder ct-size-guide.zip in directory *wp-content > plugins*

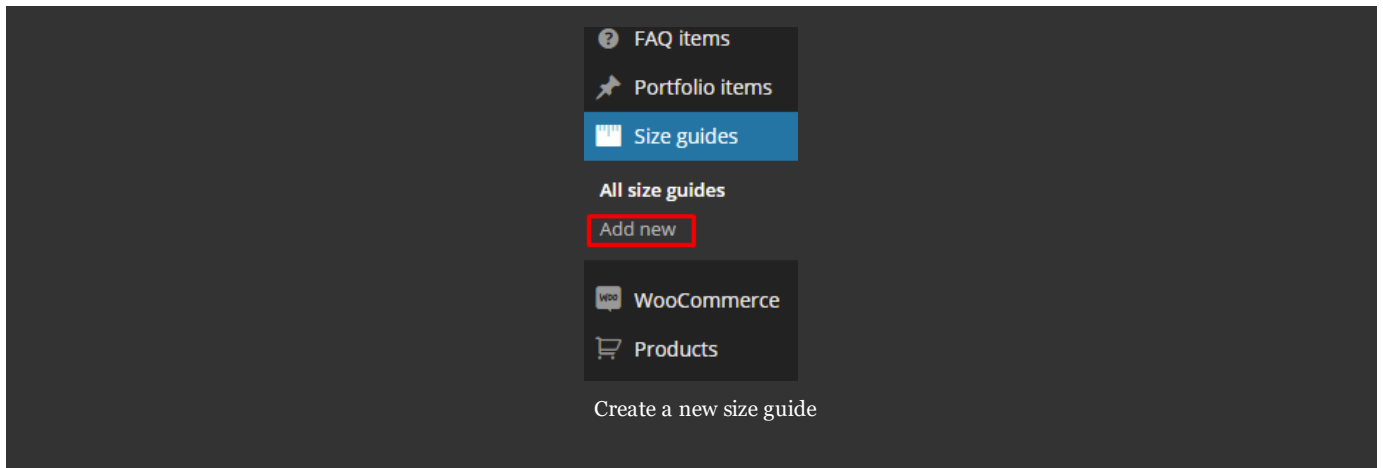

1.2 Creating a size guide

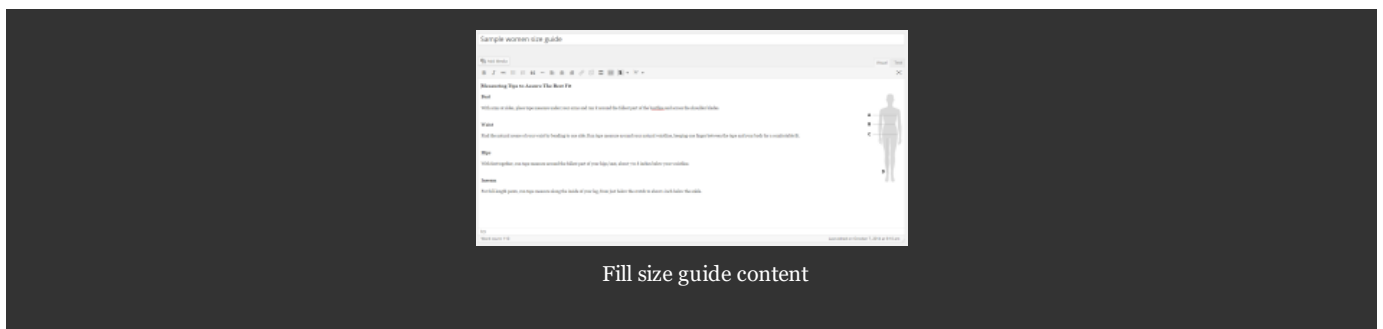

Please note that upon plugin activation there are two sample size guides created, for a quick start you can just edit them!

To create a new size guide:

Go to Size guides > Add new in your WordPress Admin Panel

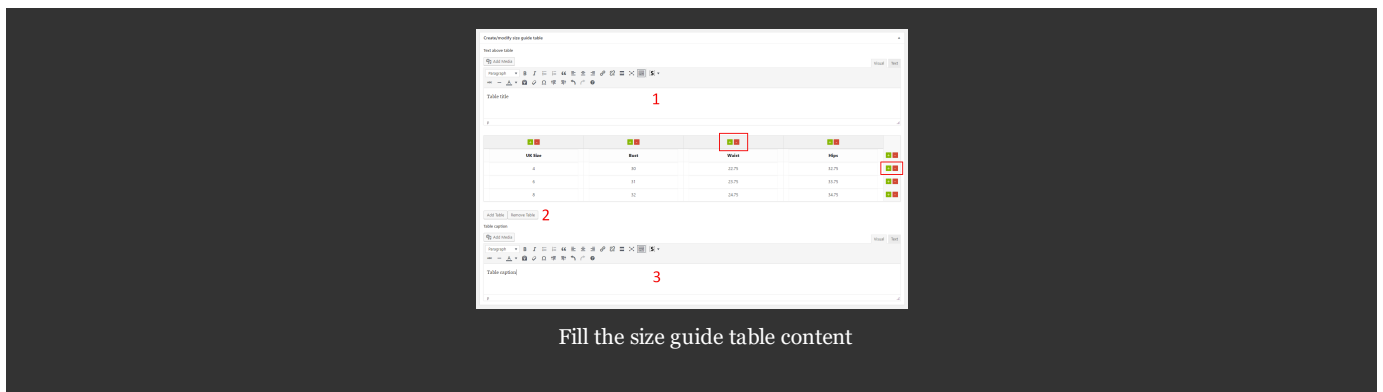

Insert a title and content

Title will be the name of the size guide. In the content, you can for example describe how a customer can measure its sizes properly.

Fill the size guide

In the sections 1 and 3 you can specify a table header and a caption.

To add/remove columns and rows just use the plus/minus buttons (inside red squares on the screenshot). Right, it's as simple as that!

Fill table cells by just clicking on them and inputing the text.

Everytime you create a size guide there is a basic 4×4 table attached to make your work easier.

If you wish to add or remove added extra table use the Add Table or the Remove Table button (2)

Publish it and go to the next section

Hide Size Guide

Check this field to hide size guide when the product is out of stock.
Size guide will be displayed if you allow backorders in products settings.

Open guide with

Choose whether to display a simple link or a button to open the size guide.

Button/link position

You can display it either above the product summary tabs (Description, Reviews etc.), after the ‘add to cart’ button, as a tab or use the `[ct_size_guide]` shortcode anywhere in your theme.

Button/link hook priority

Priority of the action that outputs the button/link. Priority is *“Used to specify the order in which the functions associated with a particular action are executed. Lower numbers correspond to earlier execution, and functions with the same priority are executed in the order in which they were added to the action.”*

If you choose to display the Size Guide above the product summary tabs or after the ‘add to cart’ button this might help you change the position. The final outcome might depend on other plugins and theme features that use the given hooks. ‘woocommerce_after_add_to_cart_button’ hook is not used often, but the ‘woocommerce_single_product_summary’ is commonly used. The basic actions hooked in (almost) every WooCommerce theme are:

woocommerce_template_single_title – 5
 woocommerce_template_single_price – 10
 woocommerce_template_single_excerpt – 20
 woocommerce_template_single_add_to_cart – 30
 woocommerce_template_single_meta – 40
 woocommerce_template_single_sharing – 50

where the numbers mean the priority. The lower the digit is, the earlier the action will be executed. For example, if you display the Size Guide above the product summary tabs, you can display it right under the title by setting the priority to 7 (or anywhere between 5 and 10) or after the price by setting it to 15 and so on.

Button/link label

Enter the text to be displayed in the link/button. Default: *Size Guide*.

Button/link align

Choose if the button should be aligned left or right.

Button/link clearing

Allow or disallow floating elements on the sides of the link/button.

More advanced users: if set to no, this option will add a 'clearfix' after the button/link.

Button class

You can add any custom class to the button.

Margins

Set the margins on the sides of the link/button.

Popup overlay color

Set the color of the background behind the Size Guide popup window.

Paddings

Set the paddings inside the Size Guide popup window.

2. Using Product CSV Import Suite

Please remember that Product CSV Import Suite isn't part of the **Size Guide for Woocommerce** plugin. If you wish to use this feature you need to buy it first.

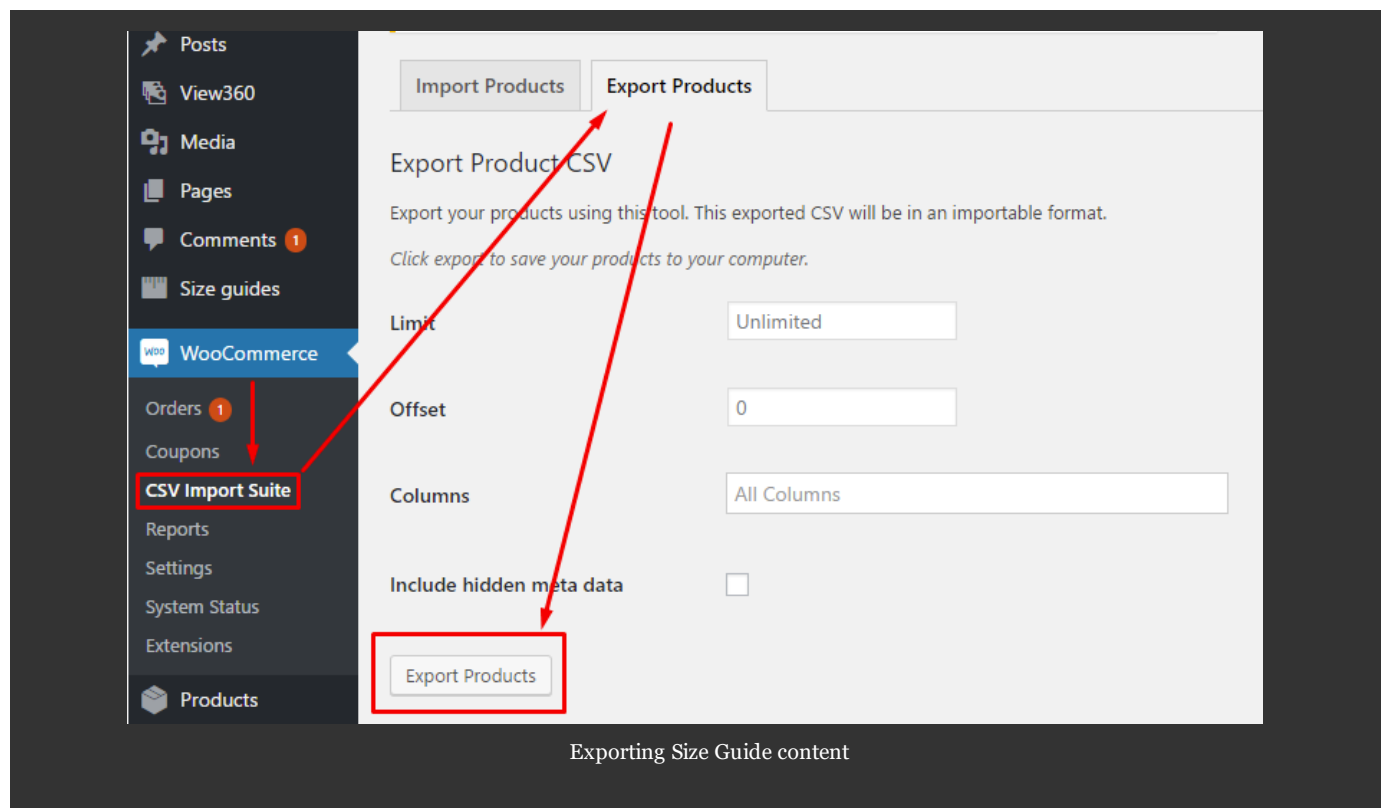

After updating the plugin to version 2.1 WooCommerce Product Size Guide is compatible with **Product CSV Import Suite**

Using CSV you will be able to export the content of your size guide items and then open them using office software like Open Office or Microsoft Excel.

After opening the file you will be able to change the content of imported tables by (for example) attaching products to new categories. Below you can check step-by-step instruction how to use this new feature from exporting product Size guide tables to importing them after adding your custom changes.

DOWNLOADING PRODUCT FILE

1. Go to **WooCommerce > CSV Import Suite** and in **Export Products** tab choose Export Products – this way you will get .csv file with all of the product information.

2. Open the .csv file using office software you have installed on your computer.

3. Please find **AO** column with the **meta:_ct_selectsizeguide** here you will find which products (you will find products name in first column) are attached to which size guide (ID numbers in the **meta:_ct_selectsizeguide**)

ADDING SIZE GUIDE TO PRODUCT

To add size guide to product you need to get the Size Guide ID to do that please:

1. Go to the *Size guides* and choose the size guide you want to add by choosing *Edit*

The screenshot shows the WordPress admin dashboard. On the left is a sidebar menu with 'Size guides' selected. The main content area shows a list of size guides. The first guide is 'Sample women size guide', and its 'Edit' link is highlighted with a red box. Below it is 'Sample men size guide'. At the bottom, there are 'Bulk Actions' and 'Apply' buttons.

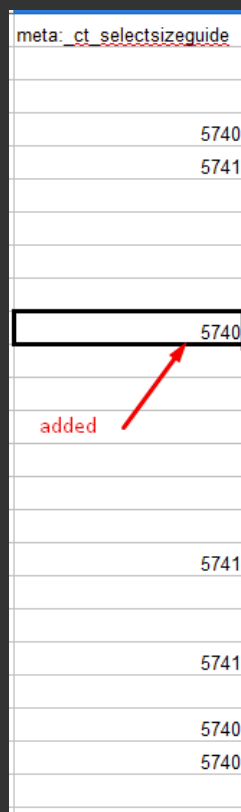

Choose SG

2. In the SizeGuide slug you will find a number – this is the ID we are looking for!

/pluto/wp-admin/post.php?post=5740&action=edit

Size Guide ID

3. Go back to the downloaded file and add the ID to the product you want to use this Size Guide and save the changes in the file.

The image shows a snippet of a CSV file. The first row has a header 'meta: ct_selectsizeguide'. Below it, several rows contain the value '5740'. A red arrow points to one of these '5740' values, and the word 'added' is written in red next to it, indicating that this ID is being added to the product's meta data.

IMPORT CHANGES

1. The last step is Importing the files with your changes – Go to *WooCommerce* > *CSV Import Suite* and in **Import Products** tab choose Import Products

2. Choose the option *Choose File* and add the file with your changes

The image shows the 'Import Products' tab in the WooCommerce CSV Import Suite. It contains instructions for uploading a CSV file. A red arrow points to the 'Choose File' button, and another red arrow points to the 'Upload file and import' button. The text 'Add your csv file' is written in red next to the 'Choose File' button, and 'when the file is added click this button' is written in red next to the 'Upload file and import' button.

Hi there! Upload a CSV file containing product data to import the contents into your shop.

Choose a CSV (.csv) file to upload, then click Upload file and import.

Choose a file from your computer: woocommerce...rt (6).csv Maximum size: 1 MB

Add your csv file

OR enter path to file:

Delimiter

Merge empty cells ☐ Check this box to merge empty cells - otherwise (when merging) the empty cells will be imported as empty

when the file is added click this button

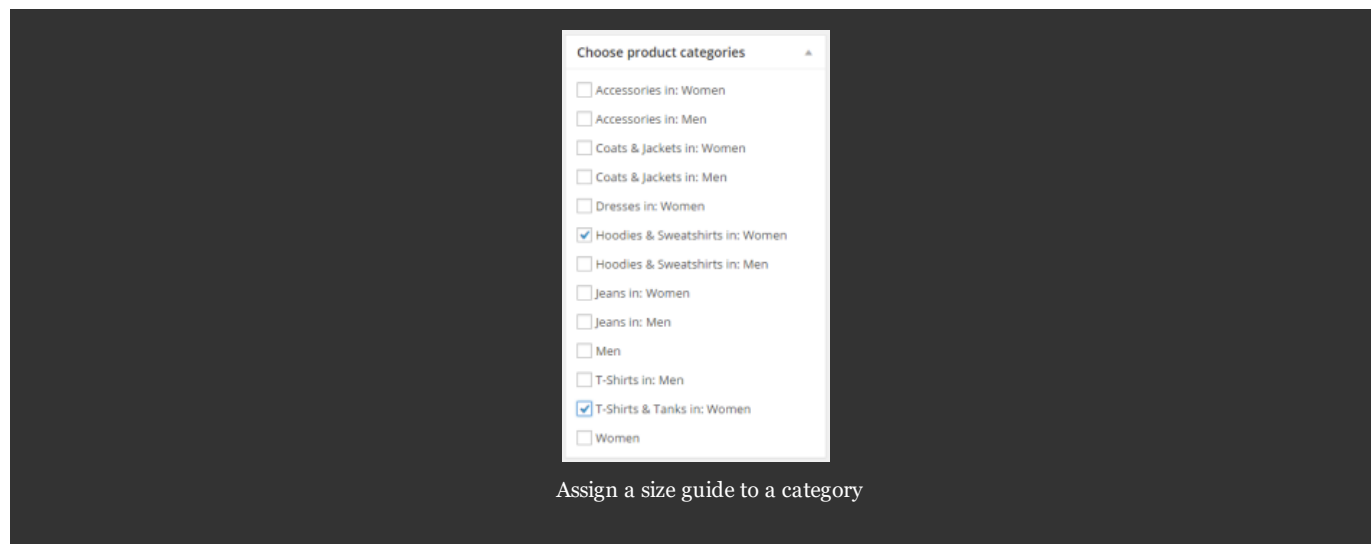

Adding the file

3. Hit the Upload file and import button and it is done!

2.1 Assigning a size guide to a product

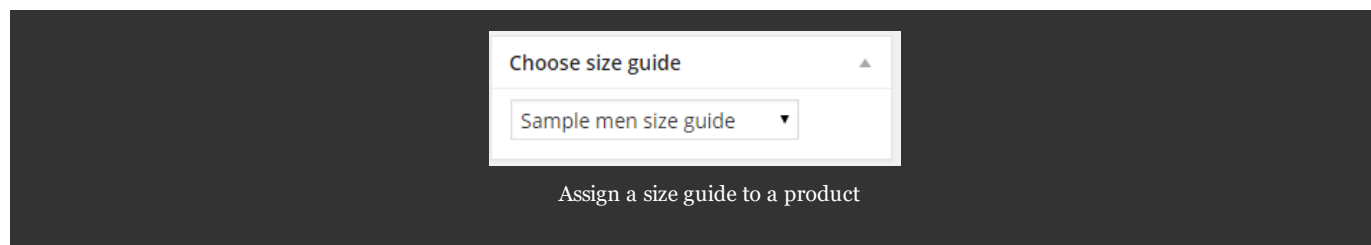

There are two ways to get the size guide displayed:

You can assign a size guide to one category or a few, by selecting a category on the size guide editing screen

Once size guide is assigned to the whole product category or categories you can still disable it for single products by checking option *Hide size guide from this product*

Or you can assign a size guide to a particular product by using the “Choose size guide” box on the product editing screen:

If you select a size guide for a particular product, it will be attached to that product even if the products category has its own size guide assigned.

2.2 Creating a style

You can add your own stylesheet to the settings tab using `ct_sizeguide_styles` filter.

Example:

```
add_filter('ct_sizeguide_styles', 'add_sizeguide_style');

function add_sizeguide_style($current){
    $StylesheetURL = 'http://www.example.com/assets/sg_style.css'; //link to the stylesheet
    $label = 'My custom style'; //name of the style to be displayed in the settings
    $current[$StylesheetURL] = $label;
    return $current;
}
```
